

Research Brief

July 2023

34% of participants had normal vision without glasses

J Most residents with age-related eye disease had vision loss.

- 70% of the 51% of residents with cataracts had vision loss
- 76% of the 27% of residents with macular degeneration had vision loss
- 70% of the 17% of residents with glaucoma had vision loss
- 64% of the 3% of residents with diabetic retinopathy had vision loss
- 63% of the 41% of residents with systemic diabetes had vision loss
- When considering all resident characteristics vision loss was statistically associated with macular degeneration, cataracts, and older age.
